

SAMAIDEN LEVERAGES ON BUYSOLAR ONLINE PLATFORM

Petaling Jaya, 8 December 2020 – SAMAI DEN GROUP BERHAD (“Samaiden” or the “Group”), principally involved in engineering, procurement, construction and commissioning (“EPCC”) of solar photovoltaic (“PV”) systems and power plants has signed a Collaborative Agreement (“the Agreement”) with OpenSys Technologies Sdn Bhd (“OpenSys Technologies”), a subsidiary company of OpenSys (M) Berhad to offer solar solutions referral to Samaiden via its buySolar renewable energy online platform.

Under the Agreement, Samaiden will provide end-to-end services within the value chain of services for solar PV system and power plant projects to potential customers. The end-to-end services include customising, designing and developing of schematic layout, procuring of equipment and materials, constructing, installing and integrating of the solar PV systems and/or power plants process. Upon the completion of the construction phase, Samaiden will commission and test the solar panels to ensure that the equipment functions as a complete system in accordance with the detailed engineering design and specifications.

buySolar is Malaysia’s first one-stop online marketplace for renewable energy with a focus on solar solutions and financing options.

“This is indeed a great opportunity for us, at Samaiden to expand our customer base through buySolar online solar energy platform by reaching out to various potential end-users and customers in the market and promote our businesses at the same time. It also benefits the customers as the platform provides a wider selection of solar energy EPCC providers, like us, to help them tailor their requirements to match their needs. With this said, we look forward to collaborate with OpenSys Technologies to spur the renewable energy market forward. By blending our knowledge and expertise with the referrals provided by OpenSys Technologies, we can jointly work to accelerate the growth of the renewable energy sector to achieve the 20% renewable energy capacity mix by 2025,” said Ir. Chow Pui Hee, Samaiden group managing director.

Being listed on the ACE Market of Bursa Malaysia on 15 October 2020, Samaiden has an extensive track record of solar rooftop systems, as well as large scale solar projects. The Group has recently announced its successful venture into the development of biogas and biomass power plants.

Luke Sebastian, Chief Operating Officer of OpenSys Technologies said: “With buySolar collaborating with reputable solar EPCC players such as Samaiden aboard our platform, we would be able to effectively broaden our reach to potential customers

in the residential and commercial segments nationwide. We believe in providing interested parties with the luxury of choice amongst tried-and-tested players, and who are able to deliver solutions that can be adapted to their differing requirements and budgets.”
